

Happy & Grateful

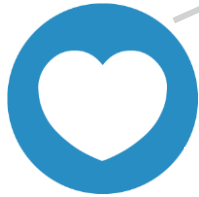

Integrity

Do you have what it takes to be the next.....

## Business Intelligence Engineer

The primary purpose of the BI Engineer will be to design, build, and maintain a data warehouse and PowerBI-based business intelligence solutions to support analytics and reporting across multiple companies and divisions. This role must be self-directed and comfortable gathering requirements from business stakeholders, designing, and maintaining a growing “big data” store populated from an expanding set of discrete data sources.

### What You'll Be Doing:

- Implement PowerBI, BrightGauge, and other analytics and data visualization tools to provide actionable insights and KPIs for marketing, sales, operations, and other business units
- Assemble large, complex data sets from multiple discrete sources to support critical business systems and decisions
- Identify, design, and document internal process improvements to enhance upstream data quality
- Build the infrastructure for extraction, transformation, and loading of data from a wide variety of sources using SQL and ETL toolsets
- Work with stakeholders across multiple divisions to assist with data-related technical issues and support their reporting needs
- Collaborate with software, business, and analytics experts to identify and develop new capabilities for our data systems
- Create and maintain optimal data pipeline architecture and secure data warehouse infrastructure
- Identify and implement ways to improve data reliability, efficiency, and quality

### Your Amazing Skills and Qualifications:

- 5+ years in data science, data engineering, or related role
- Degree in computer science, informatics, information systems, or corresponding professional experience
- Advanced SQL knowledge and experience working with relational databases, query authoring, query optimization, and stored procedures
- Expertise in data modeling, schema design, and data cubes
- Demonstrated experience building data warehouse solutions with “big data” architecture, data pipelines, workflow management, and ETL tools
- Experience with Dynamics ERP and/or CRM implementations, including Business Central, GP, or AX
- Knowledge of NoSQL/unstructured datasets, Hadoop, Spark, or other big data technologies is a plus
- Strong project management and organizational skills and the ability to work with cross-functional teams in a fun and dynamic environment
- Working knowledge of PowerBI, Tableau, or other BI analytics and data visualization tools
